2. (Amended) The apparatus of claim 13 [1], further comprising a substrate wherein
said thermochromic substance is carried on said substrate, and
said substrate is disposed with respect to said at least one exterior surface so as
to place said thermochromic substance in thermal communication with at least
a portion thereof.

8. (Amended) The apparatus of claim 13 [1] further comprising a thermal
moderator disposed between said thermochromic substance and said at least one
exterior surface, whereby said thermochromic substance is in thermal
communication with said at least one exterior surface through said thermal
moderator.

9. (Amended) In a worklight having a housing including an interior portion for
holding a light source, said housing presenting at least one exterior surface and said
light source operating at a temperature raising said at least one exterior surface to a
temperature that is hot to human touch during normal operation of the worklight, the
improvement comprising:

a transparent protective covering disposed in a readily visible location at said at
least one exterior surface;

a thermochromic substance disposed between said transparent protective
covering and said at least one exterior surface; and

a thermal moderator disposed between said thermochromic substance and said
at least one exterior surface;

wherein said thermochromic substance is in thermal communication with at least a
portion of said at least one exterior surface through said thermal moderator and is
formulated to undergo a conspicuous color change in response to heat from said at
least one exterior surface during normal operation of said worklight, said
conspicuous color change revealing [providing] an indication that said at least one
exterior surface is of a temperature hot to human touch.
